

Chapter 1: Project Overview

Project Overview This mini-project involves building a simple school database website using a Javascript framework (React or Next.js recommended) and MySQL. You'll create two pages: one to add school data and another to display it. Think of it like a mini-school directory.

Quiz Questions:

Which Javascript framework is recommended for this project?

A) Angular

B) Vue.js

C) React or Next.js

D) Node.js

Correct Answer: C

What database will be used to store the school data?

A) MongoDB

B) PostgreSQL

C) MySQL

D) SQLite

Correct Answer: C

Chapter 2: Database Setup

Database Setup Your database will need a table named `schools` with the following columns: `id` (int, AUTO_INCREMENT), `name` (text), `address` (text), `city` (text), `state` (text), `contact` (number), `image` (text), `email\_id` (text). This table will store all the information about the schools.

Quiz Questions:

What data type is the `id` column in the `schools` table?

A) text

B) varchar

C) int

D) boolean

Correct Answer: C

Which column stores the school's email address?

A) contact

B) address

C) image

D) email_id

Correct Answer: D

Chapter 3: Page 1: Adding School Data (addSchool.jsx)

Page 1: Adding School Data (addSchool.jsx)

This page will contain a form built using `react-hook-form`. Users will input school details (name, address, etc.) and an image. Input validation (like checking for a valid email) is required. The image should be saved in a folder named `schoolImages`. Remember to make the form responsive for both desktop and mobile devices.

Quiz Questions:

Which library is used for form handling in this page?

A) Formik

B) React-Redux

C) react-hook-form

D) Zustand

Correct Answer: C

Where should the school images be stored?

A) In the database directly

B) In a folder named `schoolImages`

C) In the public folder

D) In the src folder

Correct Answer: B

Chapter 4: Page 2: Displaying School Data (showSchools.jsx)

Page 2: Displaying School Data
(showSchools.jsx) This page will fetch and display the school data from the database. Only the school's name, address, city, and image should be visible, similar to how products are displayed on an e-commerce website. Refer to the example link provided in

the original instructions for inspiration. This page also needs to be responsive.

Quiz Questions:

Which information should NOT be displayed on this page?

- A) School Name
- B) School Address
- C) School Contact Number
- D) School Image

Correct Answer: C

What is the purpose of the provided reference link (<https://uniformapp.in/schoolsearch.php>)?

- A) To download the code
- B) To copy the database schema
- C) To get design inspiration
- D) To submit the project

Correct Answer: C

Chapter 5: Submission Guidelines

Submission Guidelines 1. Create a public GitHub repository. 2. Commit and push your completed project to the repository. 3. Host your project on a platform like Vercel or Netlify. 4. Submit the GitHub repository URL and the hosted project URL. 5. The deadline is strictly enforced.

Quiz Questions:

Where should you host your project?

A) Only on GitHub

B) Only on Vercel

C) GitHub and a hosting platform like Vercel or Netlify

D) Only on Netlify

Correct Answer: C

What is the consequence of missing the deadline?

A) Extra credit

B) Late submission penalty

C) No submission will be accepted

D) The project will be graded partially

Correct Answer: C
