

Chapter 1: Project Overview

Project Overview This mini-project involves building a simple school database web application using a JavaScript framework (React or Next.js is recommended) and MySQL. You'll create two pages: one for adding school data and another for displaying it. The application should be responsive, working well on both desktop and mobile devices.

Quiz Questions:

Which JavaScript frameworks are recommended for this project?

A) Angular and Vue.js

B) React and Next.js

C) jQuery and Node.js

D) Svelte and Preact

Correct Answer: B

What database system will be used for this project?

A) MongoDB

B) PostgreSQL

C) MySQL

D) SQLite

Correct Answer: C

Chapter 2: Database Design

Database Design Your MySQL database will have a single table named `schools`. This table will store information about schools, including their ID, name, address, city, state, contact number, image, and email ID. The `id` field will be an auto-incrementing integer, serving as the primary key.

Quiz Questions:

What data type is appropriate for the `id` field in the `schools` table?

A) VARCHAR(255)

B) TEXT

C) INT AUTO_INCREMENT

D) BOOLEAN

Correct Answer: C

Which field in the `schools` table serves as the primary key?

A) name

B) address

C) id

D) email_id

Correct Answer: C

Chapter 3: Page 1: addSchool.jsx

Page 1: addSchool.jsx This page will contain a form built using `react-hook-form` in Next.js. This form allows users to input and save school data into the `schools` table. Input validation (e.g., email validation) is required. School images should be stored in a `schoolImages` folder. Remember to make the form responsive.

Quiz Questions:

Which library is used for form handling in Page 1?

A) Formik

B) react-redux

C) react-hook-form

D) Zustand

Correct Answer: C

Where should school images be stored?

A) In the database directly.

B) In the `schoolImages` folder.

C) In the public folder.

D) In the src folder

Correct Answer: B

Chapter 4: Page 2: showSchools.jsx

Page 2: showSchools.jsx This page displays the list of schools from the database. Only the school's name, address, city, and image should be visible, similar to how an e-commerce site displays products (see the provided reference link). Ensure this page is also responsive.

Quiz Questions:

What information should be displayed on showSchools.jsx?

- A) All fields from the database.
- B) Name, address, city, and image.
- C) Name and email only.
- D) Address and contact number only.

Correct Answer: B

What is the purpose of the reference link provided in the assignment?

- A) To provide code examples.
- B) To provide styling inspiration.
- C) To illustrate the desired display format.
- D) To show database schema.

Correct Answer: C

Chapter 5: Submission Guidelines

Submission Guidelines 1. Create a public GitHub repository. 2. Commit and push your completed project to the repository. 3. Host

your project on a platform like Vercel or Netlify. 4. Submit the GitHub repository URL and the hosted project URL. 5. The deadline is strictly enforced.

Quiz Questions:

Where should the project be hosted?

A) Only on GitHub.

B) Only on Vercel.

C) On GitHub and a hosting platform (e.g., Vercel or Netlify).

D) On a local server.

Correct Answer: C

When are submissions due?

A) Immediately.

B) After one week.

C) By the deadline specified separately.

D) Whenever convenient.

Correct Answer: C
